

AWS IAM Credential Report

To Begin with the Lab

Summary of the Lab

In this lab, the **AWS IAM Credential Report** was generated from the **IAM** console and reviewed as a CSV file. The report provided a snapshot of credential-related information for IAM identities in the account, including password status, password last used, password rotation, MFA status, and access key activity. The video explained that this report is useful for auditing, compliance, and security reviews because it shows credential health across all IAM users in one place. The report was downloaded on demand from the IAM dashboard and opened for analysis. Finally, the lab confirmed that the credential report helps administrators quickly identify inactive credentials, missing MFA, and other security risks without checking each user individually.

Understanding the IAM Credential Report

The **IAM Credential Report** is a built-in report that shows the credential status of IAM users in an AWS account. It exists so administrators can review passwords, access keys, MFA usage, and last activity from one place instead of opening each user manually. This makes it especially useful for security audits, compliance checks, and routine account reviews. Because the report is exported as CSV, it is easy to open in Excel and analyze with filters or pivot tables.

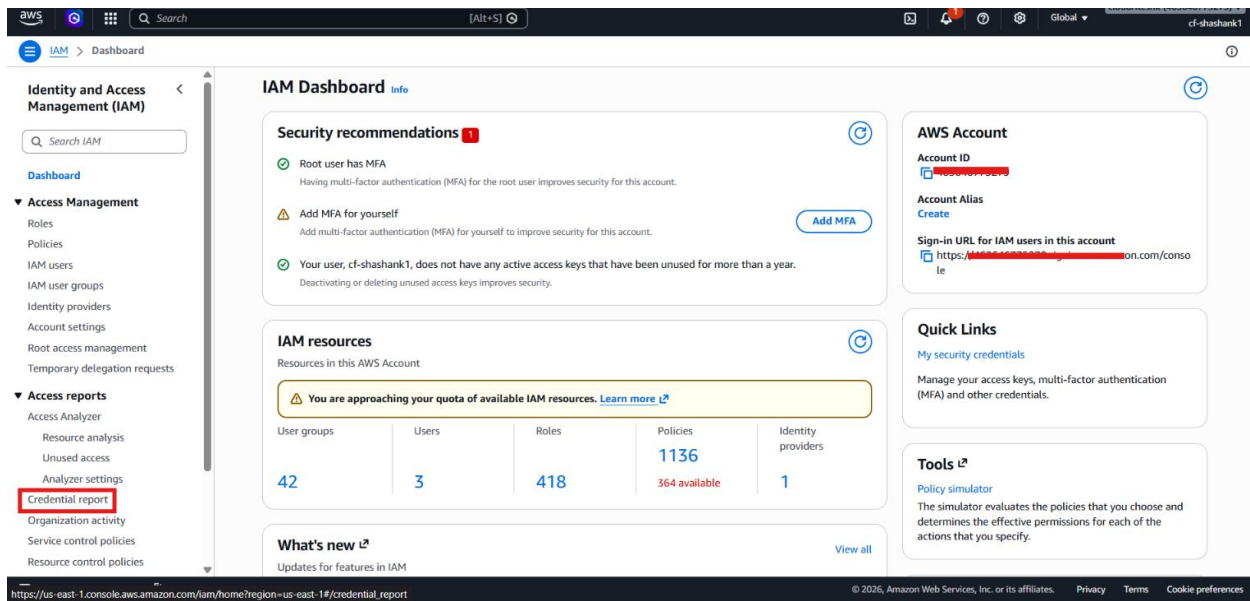

Example:

A company has ten IAM users, but only two of them have MFA enabled and one has an old access key that has not been used recently. By generating the credential report, the administrator can immediately see which users need stronger security settings. That saves time and helps the company fix weak credential settings before an audit.

Lab Steps

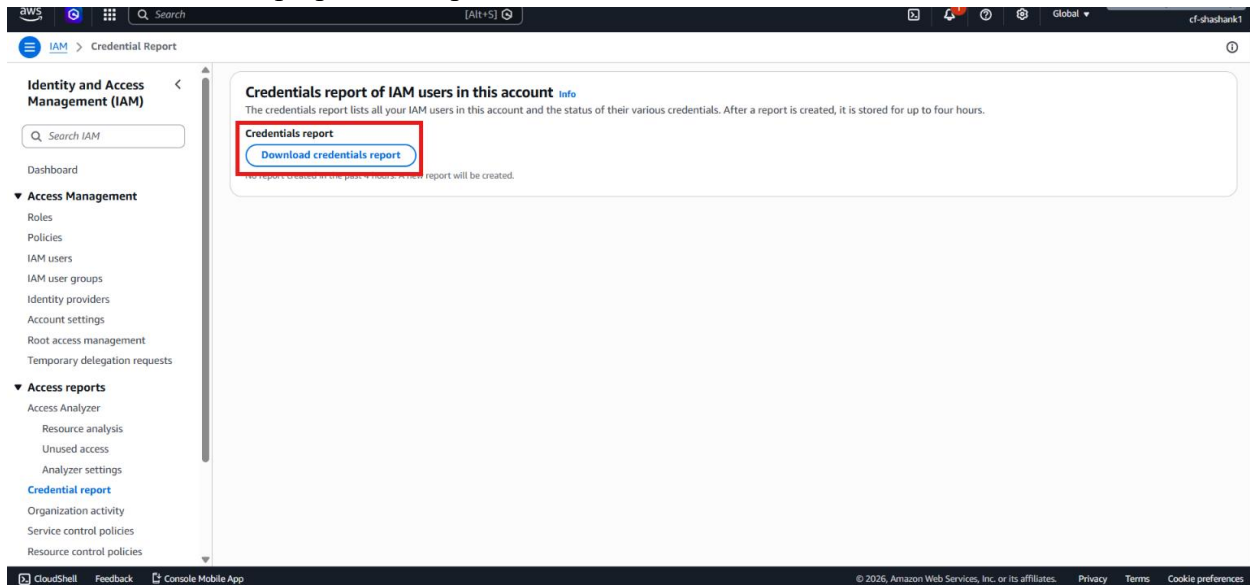

Step 1 – Open the IAM Console

- Sign in to the AWS Management Console.
- Open **IAM** and click on **Credential report** section.

Step 2 – Generate the Credential Report

- Click **Download credential report**.
- Wait for AWS to prepare the report.

- Download the report as a CSV file.
- Save the file locally for review.

Step 3 – Review the Report Contents

- Open the CSV file in Excel or a spreadsheet tool.
- Review the credential status fields for each IAM identity.
- Check the following values:
 - Password enabled

- Password last used
- Password last changed
- MFA enabled
- Access key 1 active
- Access key 1 last rotated
- Access key 1 last used
- Access key 2 active
- Access key 2 last rotated
- Access key 2 last used
- Identify users with missing MFA or old credentials.

	A	B	C	D	E	F	G	H	I	J	K	L	M	N
1	user	arn	user_creation_time	password	password_last_used	password_last_changed	password_next_rotation	mfa_active	access_key_1_active	access_key_1_last_rotated	access_key_1_last_used_date	access_key_2_active	access_key_2_last_rotated	access_key_2_last_used_date
2	<root_account	arn:aws...	TRUE	2023-01-01T00:00:00Z	2023-01-01T00:00:00Z	2023-01-01T00:00:00Z	not_supported	TRUE	FALSE	N/A	N/A	N/A	N/A	FALSE
3	arn:aws...	arn:aws...	TRUE	2023-01-01T00:00:00Z	2023-01-01T00:00:00Z	2023-01-01T00:00:00Z	N/A	FALSE	TRUE	N/A	2023-01-01T00:00:00Z	N/A	1ec2	FALSE
4	arn:aws...	arn:aws...	TRUE	2023-01-01T00:00:00Z	2023-01-01T00:00:00Z	2023-01-01T00:00:00Z	N/A	FALSE	FALSE	N/A	N/A	N/A	N/A	FALSE
5	arn:aws...	arn:aws...	TRUE	2023-01-01T00:00:00Z	2023-01-01T00:00:00Z	2023-01-01T00:00:00Z	N/A	FALSE	FALSE	N/A	N/A	N/A	N/A	FALSE

Step 4 – Use the Report for Security Review

- Check which users have active passwords.
- Check which users have MFA enabled.
- Check which users have unused or outdated access keys.
- Note any users that require credential rotation.
- Use the report as input for auditing or compliance review.

Verification

- The **IAM Credential Report** was generated successfully.
- The report was downloaded in CSV format.
- Credential details for IAM users were visible in the report.
- MFA and access key status could be reviewed from a single file.
- The report was suitable for auditing, compliance, and security analysis.
